

- **Best for paddlers up to: 130-350 lb.**
- **Maximum Load (paddler plus gear): 450 lb.**

Altura

With its extra width and length, the Altura is super-stable, but also noticeably faster and more efficient than most SOT fishing kayaks, plus we built it in composite construction, making it significantly lighter than any comparable rotomolded model.

The Altura has two fishing rod holders on either side of the mid-deck. The aft deck has a large open well to hold just about any bait bucket or cooler. Dry

storage is available just behind the seat and in the bow. Recessed paddle parks, ample bungee bow and stern, reflective safety lines and bow, stern and side carry handles are standard.

The self-bailing cockpit has a padded seat and seat back, adjustable foot brace, and a center console (with another recess for a fishing rod holder) and of course, a secure drink holder.
